DETAILED ACTION

Drawings

1. The drawings filed on 1/16/2004 are accepted by the examiner.

Claim Objections

2. Claim 26 is objected to under 37 CFR 1.75(c), as being of improper dependent form for failing to further limit the subject matter of a previous claim. Applicant is required to cancel the claim(s), or amend the claim(s) to place the claim(s) in proper dependent form, or rewrite the claim(s) in independent form. Independent claim 20 is not claiming the air flow as part of the invention therefore claim 26, which merely specifies the speed of the air flow does not further limit claim 20.

Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any

Application/Control Number: 10/758,823

Art Unit: 3749

evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

5. Claims 1-31 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 4,919,084 to Maurice ("Maurice '084") in view of U.S. Patent No. 4,128,393 to Sneed ("Sneed").

Maurice '084 discloses in Figures 1-9 an invention similar to that described in applicant's claims 1-31. In particular, Maurice '084 shows a brooder (100) with reflector (132), ceramic heating element (110), burner (116), and pilot light/burner assembly (see Fig. 1). The pilot light includes a perforated deflector (22) with cap (48) that directs flames to a thermocouple assembly with thermocouple (24).

Maurice '084 does not disclose a windshield that provides a protected zone against high velocity air for both the pilot flame and the thermocouple.

Sneed teaches a gas burner assembly that is analogous to the pilot burner assembly of Maurice '084. In Sneed, a gas burner (3) and thermocouple (2) are protected from air-flow by a perforated shield (5) having a shell-like shape. The shield forms a protected air within its confines that encompasses the flame and thermocouple (see col. 2, line 65 through col. 3 line 15).

Therefore, in regard to claims 1-31, it would have been obvious to a person of ordinary skill in the art at the time the invention was made to modify the pilot burner assembly of Maurice

Application/Control Number: 10/758,823 Page 4

Art Unit: 3749

'084 to incorporate the wind shield of Sneed as this wind shield desirably shield the flame from flame-out in all but the most extreme wind gust situations (see Sneed, col. 3, lines 16-18).

Conclusion

- 6. This action is made non-final. A THREE (3) MONTH shortened statutory period for reply has been set. Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- 7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. U.S. Patents to Strashok, Liknes et al., and Newman et al. are included to further show the state of the art concerning gas burner wind-shields. Stroh and Japanese Patent No. 2003-235375 are included to further show the state of the art concerning brooder assemblies.
- 8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Examiner Josiah Cocks whose telephone number is (571) 272-4874. The examiner can normally be reached on weekdays from 8:00 AM to 5:30 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ira Lazarus, can be reached at (571) 272-4877. The fax phone number for the organization where this application or proceeding is assigned is (703) 872-9306.
